Avoid electric charges accumulation.

In the case of large packages, connect to a grounding system and wear antistatic shoes during pouring operations.

Strong agitation and vigorous flow of the liquid in pipes and equipment can cause electrostatic charges build-up. To avoid fire and explosion hazards, never use compressed air during handling.

Avoid environmental dispersion of the product.

When using the product, do not eat, drink or smoke.

- 8.2 Exposure controls

- Appropriate engineering controls No further data; see section 7.

- Individual protection measures, such as personal protective equipment

- General protective and hygienic measures:

The usual precautionary measures are to be adhered to when handling chemicals.
Keep away from food, drink and animal feedingstuffs.
Wash hands before breaks and at the end of work.
Do not eat, drink, smoke or sniff while working.

- Respiratory protection:

If the threshold value of the substance or of one or more of the substances present in the product is exceeded, it is advisable to wear a mask with a type B filter, the class (1, 2 or 3) of which must be chosen in relation to the limit concentration of use (ref. standard EN 14387).

If gases or vapours of a different nature and/or gases or vapours with particles (aerosols, fumes, mists, etc.) are present, combined type filters must be used.

The use of respiratory protective equipment is necessary if the technical measures are not sufficient to limit the worker's exposure to the threshold values considered. In any case, the protection offered by masks is limited.

If the substance is odourless or its odour threshold is above the exposure limit, and in the event of an emergency, wear an open-circuit self-contained breathing apparatus (ref. standard EN 137) or a supplied-air respirator (ref. standard EN 138). For the correct choice of respiratory protective device, refer to EN 529.

- Hand protection

Wear protective chemical resistant gloves during product handling phase (EN 374, category III).

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.

- Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

- Penetration time of glove material

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

- Eye/face protection

It is advisable to wear airtight protective goggles (ref. standard EN 166).
